1. Conceptual Framework - Input, Process, Output

Web incident response flow with feedback into the shared record

INPUT

- Public incident reports with location, description and optional evidence.
- Resident accounts, report tracking and follow-up updates.
- Barangay dispatch, arrival, field assessment and resolution details.
- MDRRMO classification, assignment and escalation decisions.
- Safety advisories, evacuation center and hotline information.

PROCESS

- Authenticate accounts and enforce role and barangay access.
- Validate and save reports, map pins and evidence.
- Route incidents to barangay or MDRRMO work queues.
- Dispatch responders; record arrival, assessment and resolution.
- Send status changes to dashboards through web API and live updates.

OUTPUT

- Resident report receipt, tracking timeline and status updates.
- Barangay and MDRRMO queues, reports and live incident maps.
- Responder assignment, arrival and field assessment records.
- Resolved incident record and downloadable resolution document.
- Web safety advisories, evacuation center and hotline information.

FEEDBACK AND CONTINUOUS UPDATE

Resident follow-ups and authorized responder or dispatcher updates refresh the shared record and return to the live web queues.
